

Empirical Studies of Programmers: First Workshop (Human-Computer Interaction)

This volume studies programmers to gain insights to facilitate improved productivity and quality software. The chapters cover a range of topics including cognitive models of programming; measuring program complexity; the effects of program style and structure on program comprehension, production and maintenance; documentation; the effects of control structures and data structures on program comprehension, production and maintenance; evaluations of program design and construction methodologies; teaching strategies; and assessment of programmer abilities.
