

Advanced Internet Programming

This practical guide provides a detailed reference for developing Internet applications and e-commerce solutions. Readers learn how to create and use objects such as applets, scriptlets, servlets, XML-constructions, JSP, and ASP pages. The two most popular Internet technologies, JavaBeans/CORBA and ActiveX/DCOM, are described in detail. Useable Visual Basic, Java, C++, Pascal, and LotusScript examples are provided, along with the latest developments in Java and XML.
